

# Children's Health in the Miami Valley Region

James R. Ebert, M.D., MBA, MPH, FAAP

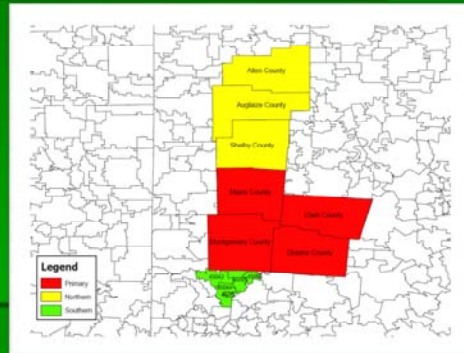

Lead Physician, Lipid Clinic, Dayton Children's Medical Center

Associate Professor, Community Health and Pediatrics

2008 Child Assessment

# Regional Assessment

- Third assessment conducted every two to three years.
- Funded CMC Foundation Board; conducted by an outside research firm
- 600 parents surveyed (at the 95 percent level of confidence)

First two assessments done in 2002 and 2004

# Regional Assessment

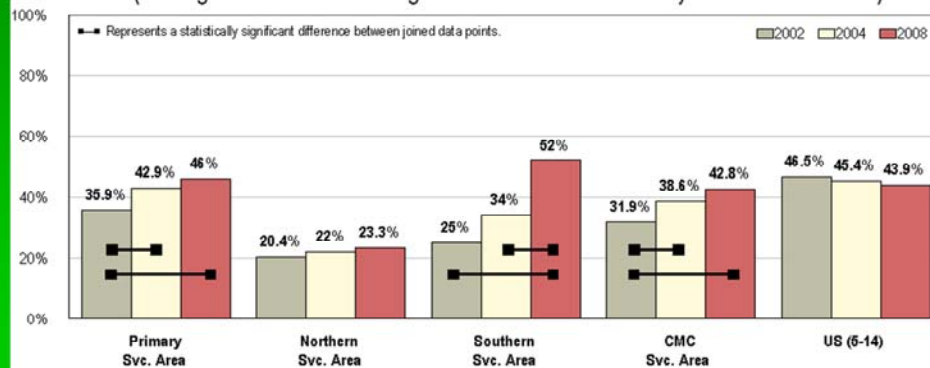

- The assessment gauges parents' perceptions of their child's:
  - Daily Life
  - General Health Status
  - Mental Health Status
  - Special Health Needs
  - Safety and Violence
  - Nutrition and Exercise
  - Medical Care
  - Health Care Access

First two assessments done in 2002 and 2004

# Helmet usage

## Child "Always" Used a Helmet While Riding a Bicycle in the Past Year (Among Parents of a Child Aged 5 to 14 Who Rode a Bicycle in the Past Year)

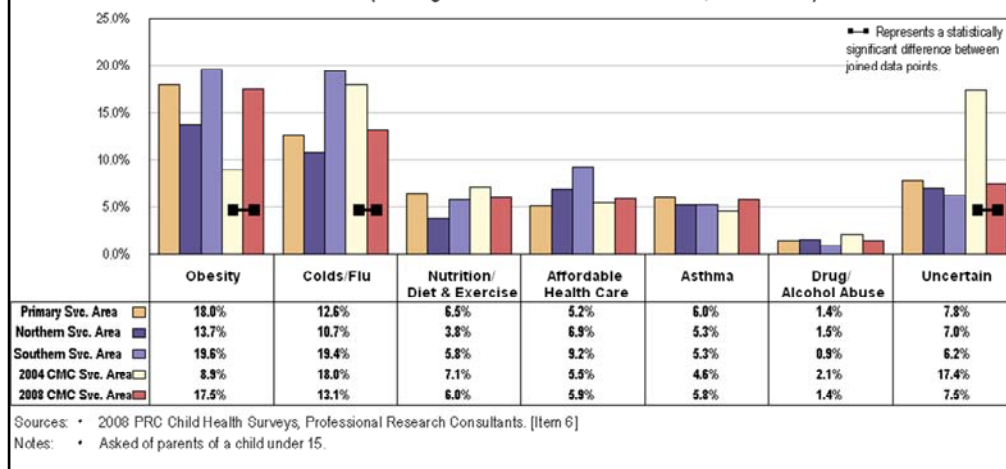

Sources: • 2002, 2004 & 2008 PRC Child Health Surveys, Professional Research Consultants. [Item 66]  
• 2008 PRC National Health Survey, Professional Research Consultants

Notes: • Percentages reflect "always" responses given by parents of children aged 5 through 14 who rode a bicycle within the past year.

# Parent's perceive child obesity the number one health issue

**Perceived Number-One Health Issue  
For Children Under 15 in the Community Today**  
(Among Parents of a Child Under 15; 2008 Data)

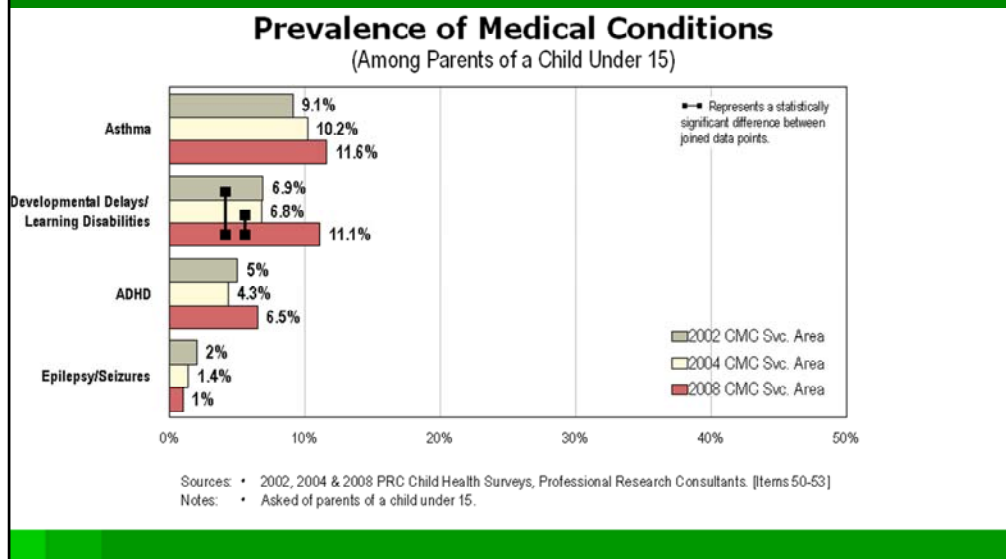

Obvious increased awareness of obesity: media, schools, etc. all talking about the issue

23.5 percent of respondents identified obesity, nutrition or exercise as the “number-one” community health issue facing area children younger than age 15.

In comparison with the 2004 findings, this marks a significant increase in mention of obesity as the number-one health issue.

# Parents identified medical conditions

Dr. Kasten thinks increase may partially be due to increase in diagnosis and understanding of autism spectrum

The most prevalent medical conditions among area children: allergies to airborne substances (13.9%), asthma (11.6%), and developmental delays/learning disabilities (11.1%, a significant increase over 2004 findings).

Twenty-five percent of children with asthma and 14.4% of children with airborne allergies missed school in the past year because of their condition.

# **How big is childhood obesity in the Greater Dayton/Montgomery County/Miami Valley area?**

- Montgomery County
- Eleven County totals (Montgomery, Greene, Fayette, Clinton, Warren, Butler, Darke, Miami, Clark, Shelby)

## Overweight (BMI>85<sup>th</sup>%)

- Montgomery County
  - 19,605
- 11 County Region
  - 62,801

2006 census estimates and NHANES data

## **Obese (BMI $\geq$ 95<sup>th</sup>%)**

- Montgomery County
  - 6,535
- 11 County Region
  - 20,937

2006 census estimates and NHANES data

# Insulin Resistance Syndrome

---

- Montgomery County
  - 4,455
- 11 County Region
  - 14,366

2006 census estimates, NHANES data, and CMC Lipid Clinic data

- *Approximately 900 children with IRS are followed at Dayton CMC*

# Impaired Glucose Tolerance

---

- Montgomery County
  - 1,294
- 11 County Region
  - 4,173

2006 census estimates, NHANES data, and Sinha's 2002 data

- *Approximately 200 children with impaired glucose tolerance are followed at Dayton CMC*

# Type II Diabetes

---

- Montgomery County
  - 98
- 11 County Region
  - 316

2006 census estimates, NHANES data, and Sinha's 2002 data

- *Approximately 100 children with T2DM are followed at Dayton CMC*
